

Data Analyst Internship Task Assignment

College Dashboard

Objective : You are required to manually enter at least two months of data into an Excel sheet, following the given column names for both Teachers and Students. Ensure that the data is structured properly and aligned with the specified format. This will help in creating a well-organized dataset for further analysis and dashboard development.

Once the data is entered, review it for accuracy before proceeding with Power BI visualization.

Student Section :

1. Student ID
2. Name
3. Mobile No
4. Email
5. Parent's Name
6. Parent's Mobile No
7. Class/Grade
8. Section
9. Date of Birth
10. Gender
11. Address
12. Fees Paid
13. Pending Fees
14. Total Fees

- 15. Attendance (%)
- 16. Enrollment Date
- 17. Previous School Name
- 18. Emergency Contact Name
- 19. Emergency Contact No
- 20. Scholarship (Yes/No)

1. Attendance Analysis :

- Monthly Attendance Trend (Line Chart)
- Class-wise Attendance Percentage (Bar Chart)
- Top 5 Students with Highest Attendance (Table)
- Students with Less Than 75% Attendance (List for follow-up)

2. Fee Management :

- Total Fees Collected vs Pending Fees (Gauge Chart)
- Class-wise Fee Collection (Stacked Bar Chart)
- Monthly Fee Payment Trend (Line Chart)
- Students with Pending Fees (Table with Filters)

3. Student Demographics :

- Total Students Count (Card)
- Gender Distribution (Pie Chart)
- Class-wise Student Distribution (Stacked Column Chart)
- Scholarship Holders vs Non-Scholarship Students (Donut Chart)

4. Academic Performance (If Data Available) :

- Class-wise Average Marks (Bar Chart)
- Top 10 Performing Students (Table)
- Subject-wise Pass Percentage (Heatmap)

5. Parent & Contact Details :

- Students with Missing Parent Contact Information (Table)
- Emergency Contact List (Table with Search)

6. Admission & Dropout Analysis :

Monthly New Admissions Trend (Line Chart)

Yearly Dropout Rate (KPI Card)

Class-wise Admission Distribution (Bar Chart)

Objective : You are required to manually enter at least two months of data into an Excel sheet, following the given column names for both Teachers and Students. Ensure that the data is structured properly and aligned with the specified format. This will help in creating a well-organized dataset for further analysis and dashboard development.

Once the data is entered, review it for accuracy before proceeding with Power BI visualization.

Teacher Section :

1. Teacher ID
2. Name
3. Mobile No
4. Email
5. Date of Birth
6. Gender
7. Address
8. Department/Subject
9. Qualification
10. Experience (Years)
11. Attendance (%)
12. Salary
13. Bonus
14. Advance Payment
15. Joining Date

1. Attendance Analysis :

Monthly Attendance Trend (Line Chart)

Teacher-wise Attendance Percentage (Bar Chart)

Top 5 Teachers with Highest Attendance (Table)

Teachers with Less Than 75% Attendance (List for follow-up)

2. Salary & Payment Management :

Total Salary Paid vs Bonus vs Advance Payments (Gauge Chart)

Department-wise Salary Distribution (Stacked Bar Chart)

Monthly Payroll Trends (Line Chart)

Teachers Who Took Advance Payments (Table)

3. Teacher Demographics :

Total Number of Teachers (Card)

Gender Distribution (Pie Chart)

Department-wise Teacher Count (Stacked Column Chart)

Experience-wise Teacher Distribution (Histogram)

4. Subject & Workload Analysis :

Number of Teachers Per Subject (Bar Chart)

Class-wise Teacher Distribution (Matrix Table)

Average Teaching Hours Per Week (Line Chart)

5. Hiring & Retention Analysis :

Monthly New Teacher Hires (Line Chart)

Teacher Turnover Rate (KPI Card)

Years of Experience vs Retention (Scatter Plot)

6. Contact & Personal Details :

Teachers with Missing Contact Details (Table)

Emergency Contact List (Table with Search)

Arrange Visuals on a Single Page

Place Teacher Dashboard visuals on one side.

Place Student Dashboard visuals on the same page.

They will dynamically show/hide based on the slicer selection.

Test the slicer to ensure only relevant data appears when switching views.

This method ensures both dashboards exist on the same page but are visible one at a time, just like switching between Store 1 & Store 2 in retail dashboards.
